How to create your own special stitches

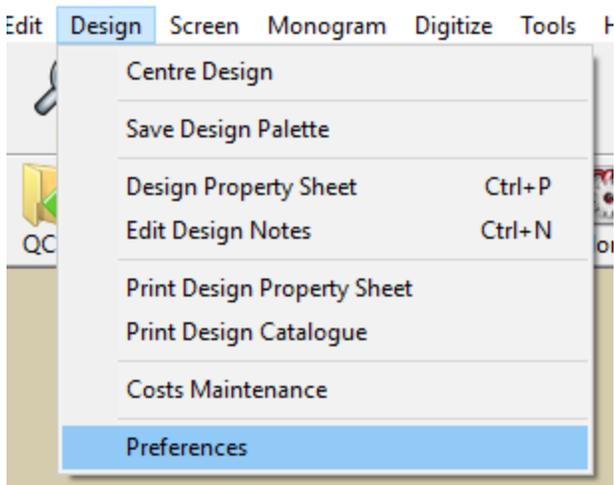

This help document will show you how to digitise and create your own 'special stitches'. It assumes you have read the 'How to digitise a straight and curved running stitch' how to document.

Step 1: (Open EDS)

To start, open the Data 7 EDS system.

Step 2: (Design Values)

Set your desired stitch length and density using the EDS 'Preferences' as shown below.

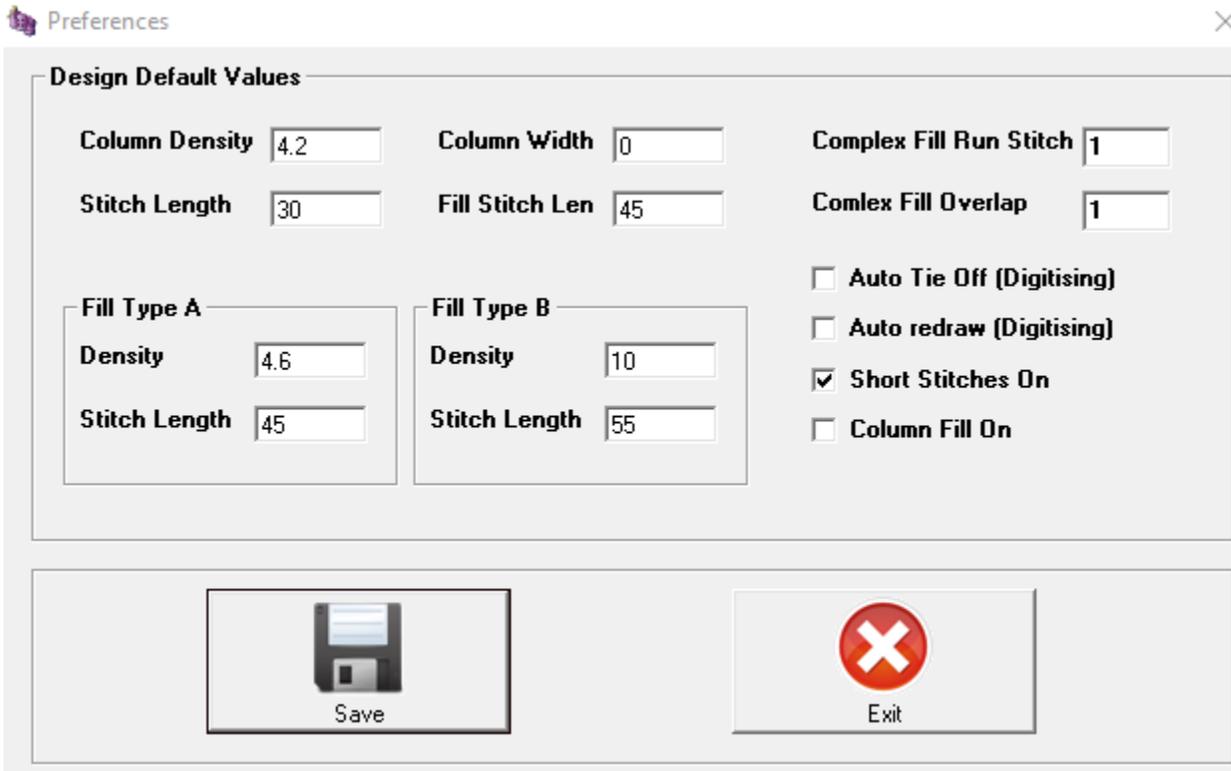

The stitch length in this example is set to 30 points highlighted below. Each point is 0.01mm and so 30 points = 3.00 mm meaning that each running stitch will be placed 3mm apart from each other. You can change this to your own value if needed.

How to create your own special stitches

You can find more about these values and others, what they do and how to use them in the “Design Values Tutorial”.

Step 3: (Start digitising)

Start a new digitising session by selecting “Start Session” from the “Digitise” menu or the ‘Dig’ icon as show below.

Step 4: (Choose colour)

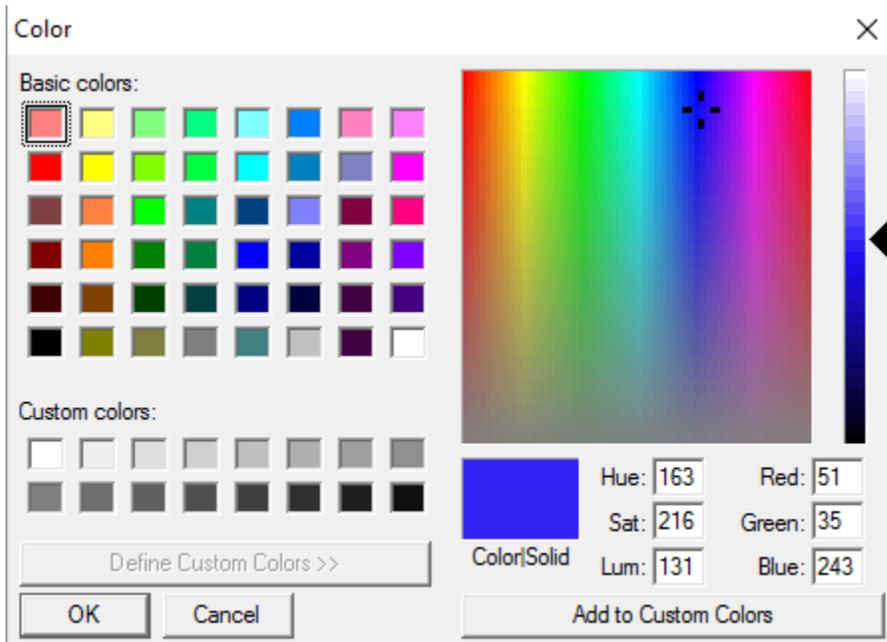

Next choose a starting colour you wish to digitize with using the “Color” dialog box as shown below.

Step 5: (Mark the design origin)

Mark the Origin or centre of your design using the left mouse button. This can be anywhere in the digitising window as shown below

Step 6: (Digitising your special stitch)

Please note: The first and last stitches in the special stitch design dictate the **angle** that the special stitch will be sewn and must be a condense format 'run stitch'. In fact, all stitches must be 'run stitches'.

OK, so we can now start to create our special stitch by clicking the left mouse button to lay down 'running stitches' in way we want to. In the below example I've created a simple column type special stitch. See image below.

Once complete, you can use the 'point editing' option to refine your special stitch.

Step 7: (Saving your special stitch)

The format and name you give your special stitch is important. You must use the 'save as a special stitch' option and the name 'must' be a 1 or 2 digit number for example; 1.qss, 2.qss, 10.qss etc.

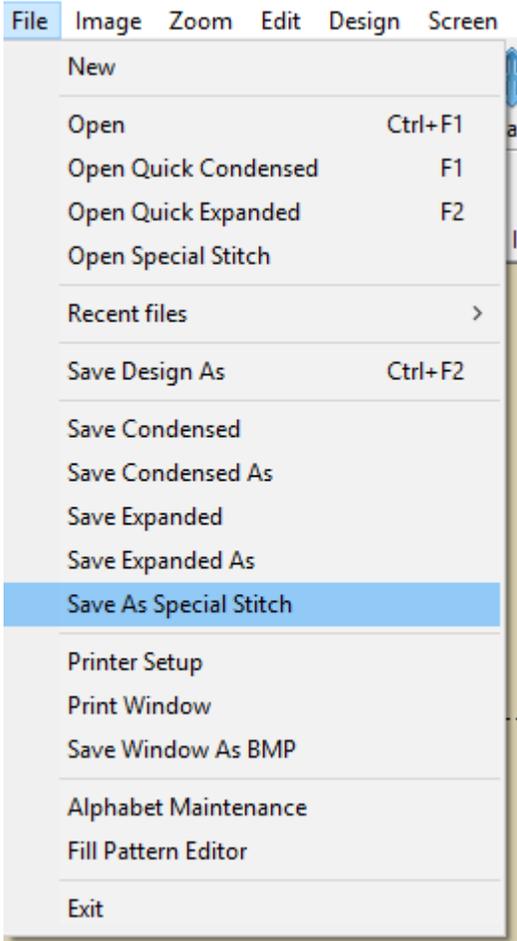

Ok, so go ahead and choose the 'Save As Special Stitch' option as shown below.

Now click the save button. OK, your special stitch is now ready to use.

To start using your new special stitch, please see 'How to digitise using special stitches (Straight and curved)' help document.
